

# CERAMSLIP

## Metal-free anti-seize

**MOLYSLIP**<sup>®</sup>

### Description

MOLYSLIP CERAMSLIP is a premium performance, metal free anti-seize compound formulated to protect fasteners from seizure induced by extremes of temperature, pressure and corrosion. The fully synthetic base fluid contains a unique combination of micronized, non-metallic particles to provide excellent lubrication and protection to threads and components.

MOLYSLIP CERAMSLIP is resistant to extreme temperatures - up to 1500°C due to the ultra-high melt point solids that remain stable where traditional filler metals would fail. The non-metallic nature also means that the risk galvanic corrosion due to the presence of dissimilar metals is eliminated. MOLYSLIP CERAMSLIP is suitable for use on brake assemblies, all studs, nuts, bolts and other threaded connections, including exhaust systems and manifolds.

### Technical Data

Property	Result
Appearance	Smooth beige paste
Consistency	NLGI 1
Drop point	>300 °C
Effective temperature range	-100 °C to +1500 °C

When a compound is applied to a threaded fastener that will be tightened to a specific torque setting, the torque setting will require adjustment to allow for the lubricating effect of the compound. Failure to do so can result in incorrect tension in the fastener. Correct torque settings can be calculated using the table below and the standard thread equation:  $T = KDP$   
T = Torque (N.m) K = Nut Factor D = Diameter (m) P = Clamping force (N)

Material	K Nut Factor
8.8 steel self coloured	0.13
8.8 steel BZP	0.12
8.8 steel hot dip galvanised	0.15
A2 stainless steel	0.18
Brass	0.11

These results were obtained from the tension-torsion relationship measured on M12 x 50mm setscrews with 1.75mm thread pitch, full nut and form A washers. Fasteners were degreased and a thin layer of compound applied to the thread, underside of bolt head and top of the nut.

Available in 500g tin

### Benefits

- Ensures consistent friction between threads
- Protects against galling and seizure
- Protects against rust and corrosion
- Eases assembly and dismantling of components

### Instructions for use

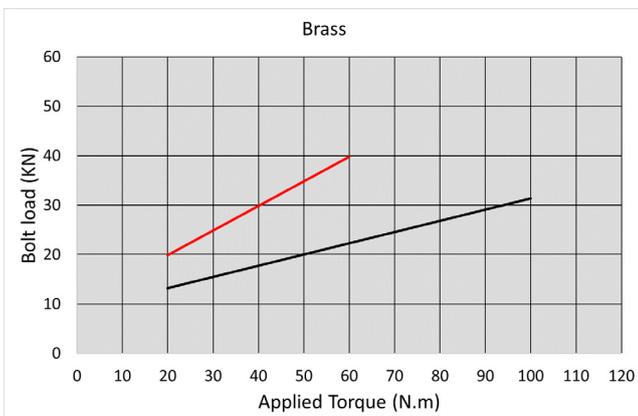

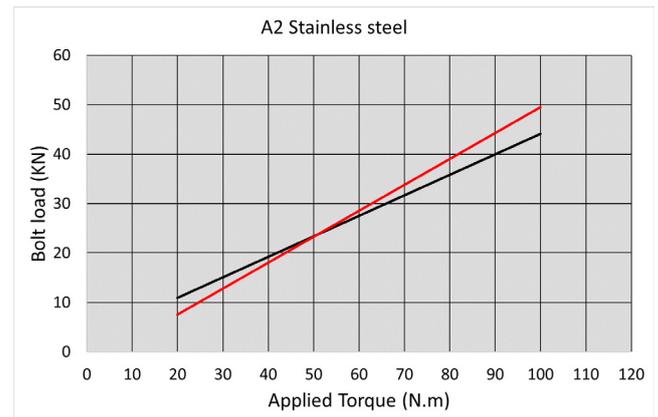

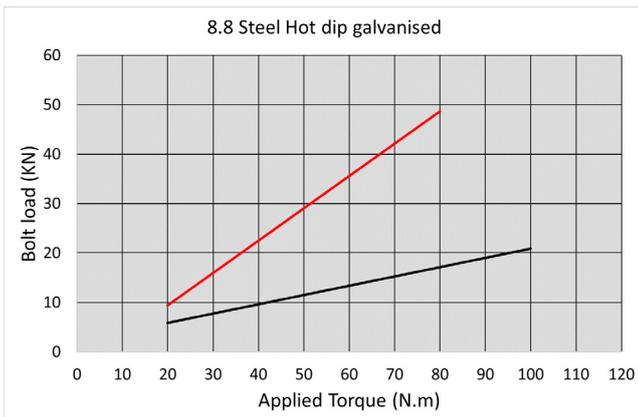

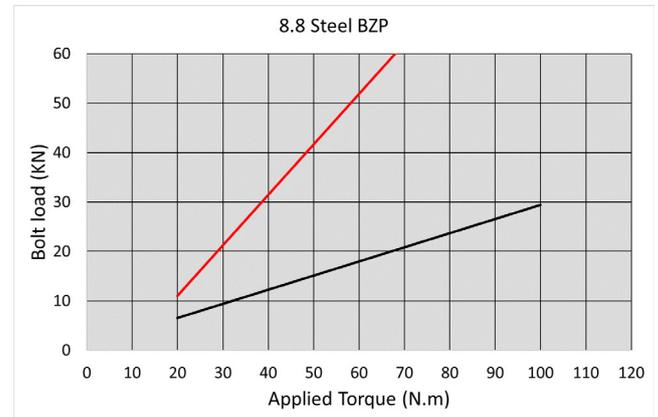

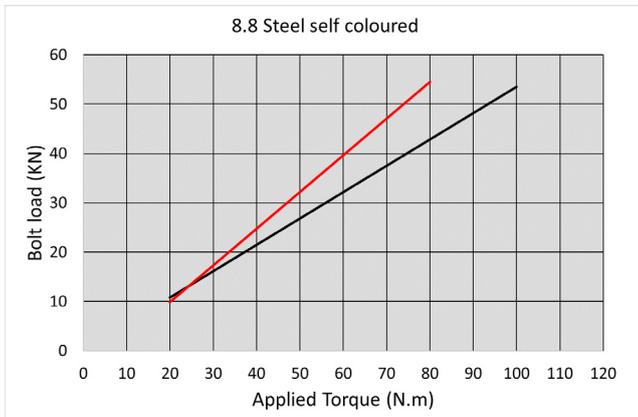

MOLYSLIP CERAMSLIP should be used as supplied. Ensure surfaces to be treated are clean and dry - free from oil, grease or dirt contamination. Apply a thin even coating by rubbing onto the surface with a lint free cloth.
